EDUCATION

Chaitanya Bharathi Institute of Technology (CBIT)

B.E. in Artificial Intelligence and Data Science

Hyderabad, Telangana

Graduated May 2025

- Coursework: Machine Learning, Deep Learning, NLP, Distributed Systems, DBMS, Advanced Algorithms.

PROFESSIONAL EXPERIENCE

Nextenti Tech Private Limited

Software Development Engineer I

Hyderabad, Telangana

February 2026 - Present

- Built an AI screening chatbot combining NLP intent classification and retrieval-augmented generation over a healthcare corpus, serving 50+ daily sessions.
- Redesigned MongoDB schemas and aggregation pipelines with compound indexes, cutting average query latency by approximately 80%.
- Shipped a multi-role recruiter portal with role-based access control and a real-time job-matching dashboard, partnering with product and design.

Self-Employed

AI Consultant

Hyderabad, Telangana

October 2025 - Present

- Owned a predictive analytics engagement end to end for a Singapore-based client, from data ingestion through production deployment.
- Engineered a multi-source RAG briefing system on a local LLM stack (Ollama, Qwen 2.5 Coder 14B), cutting per-query LLM cost by approximately 90%.

Yellow.ai

AI Developer & Business Analyst

Bangalore, Karnataka

April 2025 - September 2025

- Built modular AI workflows orchestrating LLM calls and backend microservices, improving task completion rates by 25% over baseline.
- Designed multi-tenant architectures with reusable components, reducing per-client development effort by 20%.

PROJECTS

Multi-Agent Job-Search Automation Pipeline (GitHub)

- Designed a hierarchical multi-agent system with a coordinator managing state and fallback across sub-agents for role discovery, JD parsing, and semantic resume matching.
- Built per-step observability (tokens, tool traces, latency) enabling per-run cost reconciliation and structured, per-role match-score reports.

Tech-Stack : LangGraph, MCP, Apify, Sentence-Transformers, Python.

High-Performance Review Analysis System (GitHub)

- Replaced LLM-based topic consolidation with HDBSCAN density-based clustering plus Metal GPU acceleration and 48 parallel workers with semantic deduplication.
- Reduced topic-grouping latency by approximately 240x and processing load by approximately 50% while maintaining topic coherence.

Tech-Stack : Python, Metal GPU, HDBSCAN, Ollama.

Earthquake Magnitude Prediction (Published Research)

- Co-authored published research on a hybrid CNN-GRU architecture with denoising and normalization preprocessing for spatial-temporal seismic data.
- Reduced overfitting by approximately 18% and outperformed baseline regression models on held-out sets.

Tech-Stack : Python, PyTorch, CNN, GRU.

SKILLS

Programming Languages Python, SQL, JavaScript, TypeScript, Java, Go, Rust, Kotlin.

AI/ML & Agents LangGraph, MCP, RAG Pipelines, Tool-Calling, Agent Orchestration, Sentence-Transformers, ChromaDB, Ollama, Prompt Engineering.

Deep Learning PyTorch, TensorFlow, CNN, GRU, RNN, HDBSCAN, NLP, Transfer Learning.

Backend & Infra FastAPI, Spring Boot, Django, Docker, Kubernetes, Microservices, REST, gRPC, OAuth 2.0, CI/CD.

Data & ML Production MongoDB, PostgreSQL, ETL/ELT, Pandas, NumPy, LLM Observability, Anomaly Detection.

Tools & Frameworks Git, GitHub, Celery, Redis, Row Level Security, Google Colab.

Additional Skills Problem Solving, Critical Thinking, Cross-Functional Collaboration, Technical Documentation.
